

## DIGITAL PICK AND TRANSPORT PROCESS IN AUTOMOTIVE LOGISTICS

This year, Schnellecke will be at the International Suppliers Fair (IZB) in Wolfsburg for the 10th time.

Since the first International Suppliers Exchange (IZB) in Wolfsburg, Schnellecke has been present without interruption. Of the 838 exhibitors from 34 countries, this applies only to a further 6 companies.

The organisers counted around 50,000 visitors on the three days of the fair. Think Digital" was a focus of the trade fair which Schnellecke used to present its control system "TransportControl" in a practical way. This worldwide unique system makes it possible to control driverless transport vehicles independently of the manufacturer. In connection with sequencing using RFID wristbands, Schnellecke trainees presented how the company integrates digital technologies into its processes.

The interest of the visitors was high and so there was constant movement on the stand.
