

## THIS IS KATE - THE SMALL AUTOMATIC TRANSPORT UNIT

KATE ensures a constant and reliable flow of goods within a plant tailored to customer requirements.

KATE vehicles automatically and flexibly transport loads of up to approx. 50 kg, such as small load carriers or cartons. Thanks to the direct connection to a powerful control system, they can be used individually or in combination.

TransportControl coordinates and visualises KATE vehicles or other driverless vehicles if required. Together with Götting KG, Schnellecke Logistics founded GS Fleetcontrol GmbH and jointly developed the TransportControl control system. This means that not only driverless transport systems but also forklifts and stacker cranes can be controlled, regardless of manufacturer - a system that is currently unique in the world.

See for yourself from 16 to 18 October at the International Suppliers Fair in Wolfsburg.

### OUR HIGHLIGHTS AT THE IZB

At the IZB we will present our technological innovations and a world first.
